PROJECT DESCRIPTION

The City of Rochester and the Rochester City School District joined forces to create this $36 million project that integrated the Thomas Ryan Community Center and Library with the Audubon School #33. The project entailed the replacement of the aged and undersized Sully Branch of the Rochester Public Library and the obsolete Webster Recreation Center with a more appropriate 40,000 SF facility contiguous with the Audubon School #33. This building addition, along with major renovations to the 155,000 SF Audubon School #33, accomplish enhanced provisions of the academic programs and a wider array of student support services while also serving the northeast community.

PARTICIPATION

As project manager for the Rochester City School District, David Strabel was responsible for the public works contracts administration, budget compliance and overall progress of the project from conception to completion.
